Why is NZ Steel Building a Bess battery?

Built on land leased from NZ Steel, the site for the BESS (battery energy storage system) was ideal due to its proximity to the national grid, and closeness to the country's largest city. It will create around 50 jobs during construction. Contact has the option to further expand the capacity of the battery from 100MW to 130MW at the Glenbrook site.

What is a Bess battery & how does it work?

A BESS is a number of large batteries that operate together as an energy storage facility, and is a bidirectional user of an energy network - meaning that it is able to 'take' energy from the grid (to store), and it can discharge that energy back into the system when required.

What is a battery energy storage system (BESS)?

Over recent years, it has become common for utility-scale solar projects in Australia to include a grid-scale battery energy storage system (BESS) to provide energy generated by the solar farm to the grid outside of the times when the sun is shining.

Why is Contact Energy launching a Bess facility in New Zealand?

"Contact Energy's BESS facility represents a significant step towards a more sustainable and resilient electricity network for New Zealand," says Paul Minchin, New Zealand Location Director. "By integrating BESS technology, we're providing a viable alternative and enhancing the dispatchability of renewable energy sources."

Meridian Energy, a New Zealand state-owned energy company, has completed the development of its 100MW/200MWh 2-hour duration Ruakaka battery energy storage ...

The Glenbrook Battery Energy Storage System (BESS) project is tackling Aotearoa New Zealand's electricity capacity and supply quality challenges in South Auckland.

Our fully integrated, plug-and-play battery energy storage solutions (also known as BESS) come in different
