What is a micro-inverter solar panel?

Rather than a large, central string inverter, a micro-inverter is a small DC-AC converter that is connected to the back of each solar panel. The primary benefits of the micro-inverters is that they can deliver up to 25% more power than conventional inverter systems. They are ideal for areas where shading may be an issue affecting performance.

What is a small power inverter?

Small Inverters. Our Small Inverter category includes inverters generally ranging from 125 watts to 2000 watts in 12 and 24-volt capacities. These small power inverters are great for smaller applications like boats, RVs, or other relatively smaller systems. In addition to the size, choosing an inverter with the right wave form is also important.

What is a solar inverter?

Inverters convert direct current (DC) electricity produced by solar panels into a sinusoidal alternating current (AC) of 220V, which is suitable for most electrical appliances. The assortment of inverters for solar systems on the market today is huge.

What are the different types of solar inverters?

The other popular type of inverter for solar panels is the central inverter. It functions similarly to a string solar inverter, but bigger and can handle several strings. They are used in commercial solar systems, where a lot of solar power has to be converted.

Shop micro inverter solar systems from GoGreenSolar. Our micro inverter solar kits are the easiest and most cost-effective way to go solar.

3000W Hybrid Inverter, 24Vdc to 110Vac Solar Inverter Charger Built-in 80A MPPT Controller, Pure Sine Wave PV Power Converter, Supports Battery-Less or AGM Lithium Battery
