-----

The aim of the project was to optimise the geographical and temporal distribution of surplus energy from renewable energy systems (RE systems) using bi-directional electric vehicles ...

It's the reality of bidirectional EV charging, a game-changing technology that allows electricity to flow both ways: into your car to charge it, and back out to power your home or ...

This paper presents a novel integrated Green Building Energy System (GBES) by integrating photovoltaic-energy storage electric ...

The containerized mobile foldable solar panel is an innovative solar power generation device that combines the portability of containers with the renewable energy ...

The containerized mobile foldable solar panel is an innovative solar power generation device that combines the portability of containers ...

Insights from this study may help ComEd shape future programs and investments by examining how bidirectional charging technologies could best deliver benefits to all customers, whether ...

With a bidirectional charging station, solar power can flow from the roof of a house into the car battery during the day, and back into the building from the car in the evening. This ...

The case study focuses on rural distribution grids in Southern Germany, projecting the repercussions of different charging scenarios by 2040. Besides a Vehicle-to-Grid scenario, ...

The aim of the project was to optimise the geographical and temporal distribution of surplus energy from
