How can solar power and battery storage help mining companies?

By integrating solar power and battery storage, mining companies can stabilize their energy supply and reduce their reliance on diesel. Energy Cost Savings: Solar panels capture energy during the day, storing excess power in BESS to be used at night or during periods of high demand.

Why should mining companies invest in solar & Bess?

Boost to ESG score: Solar +BESS helps mining companies earn ESG points, improving their attractiveness to investors and stakeholders. Traditional mining (diesel & grid): Struggles with compliance: Due to high emissions and reliance on fossil fuels, mining operations are at risk of failing to meet environmental regulations.

Why should mining companies use a hybrid energy storage system?

This hybrid solution enables mining companies to store energy during the day and use it during the night or peak demand periods. It's a win-win for both the environment and the bottom line.

Do solar panels save energy?

Energy Cost Savings: Solar panels capture energy during the day, storing excess power in BESS to be used at night or during periods of high demand. This reduces the need for diesel backup, cutting fuel costs significantly.

Shipping containers serve as an effective solution for Battery Energy Storage Systems (BESS) for numerous reasons. Primarily, they are significantly cheaper than constructing a new structure.

We deployed three LZY-MS1 folding solar panel containers at a remote mine site in Western Australia and the results exceeded our expectations. The rapid deployment was impressive.

Discover how Higher Wire shipping container solar systems provide reliable, off-grid power for remote worksites and projects.
