Dual-glass type modules (also called double glass or glass-glass) are made up of two glass surfaces, on the front and on the rear with a thickness of 2.0 mm each.

Compare double glass solar panel thickness configurations for international projects. Includes custom small-format options under 200W ...

The cells of a polycrystalline solar panel are larger than their monocrystalline counterparts, so the panels may take up more space to produce the same amount of electricity.

With 90% bifaciality, the double-glass module captures reflected light on its rear side. This can increase total energy generation by up to 25%, ...

In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass ...

Our industry-leading module power contributes to a conversion efficiency ...

STC: Irradiance 1000W/m², Cell Temperature 25°C, Air Mass AM1.5. NOCT: Irradiance at 800W/m, Ambient Temperature 20±176°C, Wind Speed 1m/s. *Measuring tolerance: ±177;3%. Power ...

With 90% bifaciality, the double-glass module captures reflected light on its rear side. This can increase total energy generation by up to 25%, depending on ground albedo and installation ...

In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC ...

Compare double glass solar panel thickness configurations for international projects. Includes custom small-format options under 200W for specialized global applications.

Our industry-leading module power contributes to a conversion efficiency of 23.3%. Bifacial ratio reaches 80%, 30% more power generation than conventional modules. Two-sided double ...

Compared to traditional single glass modules, double glass modules offer significant advantages, particularly in terms of efficiency and durability. The rear glass layer can absorb reflected light, ...
