One effective method for achieving this is sleep mode optimization (SMO), which involves turning off BSs when they are not needed. This research aims to propose a new ...

Aiming at the problem of mobile data traffic surge in 5G networks, this paper proposes an effective solution combining massive multiple-input multiple-output techniques ...

Therefore, in response to the impact of communication load rate on the load of 5G base stations, this paper proposes a base station energy storage auxiliary power grid peak shaving method ...

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for ...

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve communication ...

Based on this, a multi-objective cooperative optimization 5G communication base station operating model and active distribution network considering the system operation economy ...

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively ...

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and ...

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable

communication. Recognizing this, ...

To further explore the energy-saving potential of 5 G base stations, this paper proposes an energy-saving operation model for 5 G base stations that incorporates ...

With this in mind, we provide a classification of existing EE metrics and how they differ; including energy intensity (EI), bit-per-joule efficiency, consumption-related EE, and ...
