How will a 100MW battery energy storage system work?

The facility will serve as a large-scale battery energy storage system capable of charging from, and discharging into, the New York power grid. When fully functional, the 100MW battery energy storage project will be able to discharge electricity to the grid particularly during peak demand.

What is the location of the battery storage project?

ArcLight Capital Partners ("ArcLight") and Elevate Renewables ("Elevate"), a leading battery storage developer, today announced a milestone battery storage infrastructure project at the Arthur Kill Power Station in Staten Island, NY.

What is the capacity of the battery storage project?

The 15 MW/60 MWh distribution-level project will help provide more renewable power by replacing existing generation planned to retire in 2025. Once completed, the project will be the largest battery storage installation in New York City.

How do energy storage systems work?

Energy storage systems capture and hold energy for later use by shifting when and how electricity supply and demand are balanced. They're charged using electricity from the power grid during periods of low demand or extra capacity.

Kentucky's attorney general and largest electric utility provider agreed to a proposed settlement this week in a case before state ...

Elevate Renewables has completed contracting to construct a state-of-the-art battery storage facility to store power during non-peak hours and discharge power during peak ...

As project developers scramble to adapt, one thing's clear: the era of "build first, ask questions later" in energy storage is officially over. The projects that survive this shakeout will likely set ...
