What is Europe doing about cybersecurity in the solar value chain?

The European Commission is assessing cybersecurity risks in the solar value chain, with the ESMC advocating for measures like Lithuania's 2023 ban on Chinese inverters. As Europe balances energy security and economic considerations, the proposed toolbox aims to enforce risk assessments and limit remote access by high-risk vendors.

Who makes the most solar inverters in Europe?

In 2023, 78% of all inverters installed in Europe came from Chinese vendors, with the overwhelming majority being made by Huawei and SunGrow, according to DNV, a risk consultancy. The report was commissioned by SolarPower Europe, an industry advocacy group.

Could a cyberattack destabilize the European Grid?

A SolarPower Europe report warns that a cyberattack on just GW of inverter capacity could destabilize the European grid. In 2023, Chinese vendors supplied 70% of global secure solar inverters, with Huawei holding the largest market share. Recent developments have heightened scrutiny.

Why are Chinese solar inverters so popular?

The report was commissioned by SolarPower Europe, an industry advocacy group. This market dominance can likely be explained by a combination of China's large manufacturing capacity and the comparatively lower prices of Chinese inverters compared to European ones.

Europe is grappling with growing concerns over the cybersecurity risks posed by Chinese-made photovoltaic inverters, ...

The ESMC has called for a restriction of remote access to PV inverters in Europe from "high-risk" manufacturers, mainly those in China.

This isn't purely hypothetical, either. In November 2024, some solar inverters in the U.S., U.K. and Pakistan were actually disabled remotely from China.

The future of intelligent, robust, and adaptive control methods for PV grid-connected inverters is marked by increased autonomy, enhanced grid support, advanced fault tolerance, energy ...

These inverters, which are essential components that convert direct current from solar panels into alternating current usable by the electrical grid, were found to contain undocumented cellular ...

Solar container packages provide energy reliability with baseload stability and peak-shaving service, reducing blackouts and diesel fuel use. Excess electricity is exported to ...

This paper presents a European-wide techno-economic and environmental assessment of retrofitting 5G macro-cell base stations with grid-connected solar photovoltaic ...

The European Solar Manufacturing Council (ESMC) has issued a stark warning, highlighting a critical threat to Europe's energy autonomy stemming from the unregulated ...

This isn't purely hypothetical, either. In November 2024, some solar inverters in the U.S., U.K. and Pakistan were actually disabled ...

Can 5G enable new power grid architectures? This report on bringing 5G to power explores how the shift to renewables creates opportunities and challenges through connected power ...

The European Solar Manufacturing Council (ESMC) has issued a stark warning, highlighting a critical threat to Europe's energy ...

Europe is grappling with growing concerns over the cybersecurity risks posed by Chinese-made photovoltaic inverters, prompting discussions about restricting high-risk ...
