How many 5G base stations are there in South Korea?

Korean mobile operators have deployed a total of 202,903 5G base stations as of the end of February, according to previous reports. This figure is equivalent to 23% of total 4G LTE base stations installed in South Korea.

How many 5G base stations are there in the United States?

While China leads in sheer numbers, the U.S. is making steady progress. By late 2023, the country had between 150,000 and 200,000 active 5G base stations. The deployment strategy in the U.S. is different from China's, as it relies on private investment rather than government-led initiatives. Is this article too long?

What is a 5G base station?

They help fill coverage gaps, improve network reliability, and handle high data traffic. In cities, more than 60% of 5G base stations are small cells, placed on rooftops, lampposts, and building facades. These mini base stations are crucial for delivering consistent 5G speeds in crowded areas like stadiums, shopping malls, and business districts.

What is the 5G map?

The 5G Map grew into a resource that included 233 providers with over 145,000 deployments in 142 countries. Now that 5G is so fully present in so many places, we're shifting our focus to other analyses, including spotlights on the latest emerging technologies and markets where connectivity is falling behind. Download the final 5G data.
