How much solar power does Spain have?

In 2008 the Spanish government committed to achieving a target of 12% of primary energy from renewable energy by 2010 and by 2020 expected the installed solar generating capacity of 10 GW. Since 2010, Spain has been the world's leader in concentrated solar power (CSP).

Why does Spain need a solar grid?

It wants a grid that can generate, store, and sustain energy without import gaps or guesswork. For Spain, which is already a leader in solar energy, the blackout was the push it needed to build a system without limits. Back in 2021, Spain had just over 35 GW of solar capacity. Now?

Is solar energy a renewable resource in Spain?

Although wind is currently the most used renewable resource in the Mediterranean country, solar energy is growing at a very fast pace. In fact, the solar capacity installed has more than quintupled in the last five years. In 2023, Spain was the sixth country worldwide in terms of new capacity additions.

How does Spain support self-consumption solar PV?

Spain has implemented various support measures to encourage the adoption of self-consumption solar PV systems:

- o Capital Subsidies: The Spanish government, through programs like the Next Generation EU funds, has provided subsidies to offset the initial costs of installing solar self-consumption.

This fact sheet summarises key developments, including the addition of 9.3 GW dc of PV capacity in 2023, cumulative installed capacity to 39.4 GW dc. Highlights include a surge in self-consumption, ...

As it stands today, Spain operates around 35,632 MW of installed solar capacity. In just the first seven months of 2025 alone, approximately 3,029 MW were commissioned--an encouraging ...

In Spain, while there is no nationwide mandate requiring the installation of photovoltaic (PV) systems on residential buildings or car parks, certain regional and municipal regulations have been implemented to

Currently, Spain is an avant-garde in energy futures. Since tariffs have been heightened by 22% in the year 2023 and EU green regulation is surging by 42% in the year 2030, the companies ...

In fact, the solar capacity installed has more than quintupled in the last five years. In 2023, Spain was the sixth country worldwide in terms of new capacity additions.

Currently, Spain is an avant-garde in energy futures. Since tariffs have been heightened by 22% in the year 2023 and EU green regulation is surging by 42% in the year 2030, the companies are demanding innovative solutions.

According to Eurostat data from 2019, Spain is at least among the first four countries in the EU in terms of total renewable capacity, including solar as well as wind and hydro.

As it stands today, Spain operates around 35,632 MW of installed solar capacity. In just the first seven months of 2025 alone, approximately 3,029 MW were commissioned--an encouraging yet demanding pace indicative of ...

Many large concentrated solar power stations remain active in Spain and may have provided some of the impetus for large CSP developments in neighbouring Morocco.

In just a few months, Spain has green lit more than 65 GW of solar projects that launched new hydrogen and battery storage pilots in order to increase its backing of global fusion research. It ...

The first three regions alone account for over 70 % of the installed photovoltaic capacity in Spain. In contrast, the communities on the Cantabrian coast stand out as the territories with the ...

In Spain, while there is no nationwide mandate requiring the installation of photovoltaic (PV) systems on residential buildings or car parks, certain regional and municipal regulations have ...
