-----  
How will the new US import tariffs affect battery energy storage?

The new US import tariffs, including a 10% baseline on all goods and higher rates for key trading partners, such as China, Malaysia, and Vietnam, is expected to have a significant impact on the US battery energy storage industry.

Will US tariffs affect energy storage?

There have also been indications that the US administration may consider other tariff proposals impacting energy storage, such as a 10-20% universal tariff, tariffs of up to 60% across the board on Chinese-origin goods, and tariffs of 25% on Mexican and Canadian origin goods.

How will import tariffs affect energy prices?

The import tariffs will drive up the price of equipment for developers as well as the price of energy storage for off-takers, Pezzetti said. Last year, average grid-scale battery system prices fell 17% between Q3 2023 and Q3 2024, from \$1,274/kW to \$1,062/kW.

What are China's battery tariffs?

Recent trade actions have introduced significant battery tariffs on goods imported from China. These changes include duties as high as 104% on some clean energy components, including lithium-ion batteries, critical for energy storage and EV systems. According to U.S. import data, lithium battery shipments from China reached \$1.9 billion in 2024.

Energy storage components are subjected to varying import tariffs that depend on several factors, including the specific type of ...

Looking more closely at countries with solar and energy storage manufacturing and assembly, the announced custom tariff rates are: An initial 10% tariff on all imports from ...

There have also been indications that the US administration may consider other tariff proposals impacting energy storage, such as a 10-20% universal tariff, tariffs of up to ...
