Is the Czech Republic ready for pumped-storage hydroelectric power plants?

Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped. There are six localities considered for new pumped-storage hydroelectric power plants in the Czech Republic but public acceptance presents a challenge. Front-of-meter installations in the Czech Republic are mired in regulations.

Are pumped hydro storage projects eligible for state subsidies?

Pumped hydro storage projects are not eligible for any state subsidies. The Czech government subsidises the installation of photovoltaic panels located on domestic properties producing energy for their own consumption and the purchase of co-located energy storage solutions.

Is there a legal framework for electricity storage?

As indicated above, there is no specific legal framework for electricity storage, except for the existing pumped hydro storage projects. The study undertaken pursuant to NAPSG will be prepared by the end of 2016. However, no significant development of energy storage projects (save for domestic projects) is expected until the end of 2020.

The new rules support both large-scale batteries and standalone energy storage applications. Energy experts also organized a pre-launch webinar to guide participants through ...

Are you looking for information on energy storage regulation in Czech Republic? This CMS Expert Guide provides you with everything you need to know.

In the wake of the proliferation of rapid shutdown requirements across Europe, with installers in the Czech Republic deploying nearly 107MW of Tigo MLPE in 2024, Tigo products ...

How can Czech organisations make the most of their renewable generation assets? Here's a review of energy storage in the Czech market.
