CERC's new framework integrates energy storage into India's power system as a regulated asset. It has defined technical norms, tariff ...

Energy storage is critical towards ensuring grid reliability, security, and cost optimisation given India's growing share of renewable energy in its power purchase mix.

CERC's new framework integrates energy storage into India's power system as a regulated asset. It has defined technical norms, tariff mechanisms and operational rules. The ...

India's energy storage sector is still emerging, but growth and planning are rapid. Today, pumped hydro storage provides most bulk storage (existing projects total only a few ...

Three initiatives, regulations or policies related to decentralised energy storage have been updated or introduced by the relevant agencies at the national or state level.

New Delhi: India's energy storage sector is set to grow by over 12 times to 60 GW by FY32, driven by a massive increase in variable ...

This represents substantial growth from India's current energy storage capacity of approximately 6 GW (mostly pumped hydro), underscoring the need for robust policy and regulatory support to ...

India has set a target to achieve 50% cumulative installed capacity from non-fossil fuel-based energy resources by 2030 and has pledged to reduce the emission intensity of its ...

The year 2025 marked a pivotal period for India's energy storage landscape, transitioning from conceptual
