-----

New flow battery technologies are needed to help modernize the U.S. electric grid and provide a pathway for ...

Researchers at the Pacific Northwest National Laboratory have created a new iron flow battery design offering the potential for a safe, ...

New flow battery technologies are needed to help modernize the U.S. electric grid and provide a pathway for energy from renewable sources such as wind and solar power to be ...

China's first megawatt iron-chromium flow battery energy storage demonstration project, which can store 6,000 kWh of electricity for 6 hours, was successfully tested and was ...

Researchers at the Pacific Northwest National Laboratory have created a new iron flow battery design offering the potential for a safe, scalable renewable energy storage system.

By offering insights into these emerging directions, this review aims to support the continued research and development of iron-based flow batteries for large-scale energy ...

A new iron-based aqueous flow battery shows promise for grid energy storage applications. A commonplace chemical used in water treatment facilities has been repurposed ...

This work can improve the battery performance of iron-chromium flow battery more efficiently, and further provide theoretical guidance and data support to its engineering ...

Researchers at the Department of Energy's Pacific Northwest National Laboratory (PNNL) have developed a

new large-scale energy storage battery design featuring a ...

“We were looking for an electrolyte that could bind and store charged iron in a liquid complex at room temperature and mild operating conditions with neutral pH,” said senior author ...

Among the numerous all-liquid flow batteries, all-liquid iron-based flow batteries with iron complexes redox couples serving as active material are appropriate for long duration ...

This chapter discusses several key technology developments enabled as the result of the ARPAe grant, which has propelled ESS to commercialization. Some of these key ...
