Why is Qatar phasing out 3G services in 2025?

This change ensures that consumers use up-to-date technology that supports the country's evolving network needs. Qatar has announced the phase-out of 3G services by December 2025 to enhance 4G and 5G network performance and align with Qatar National Vision 2030.

When will Qatar stop offering 3G telecommunications services?

The Communications Regulatory Authority (CRA) of Qatar has set a deadline for mobile service providers to stop offering third-generation (3G) telecommunications services by December 31, 2025. This move is aimed at improving the quality of mobile services and focusing on more advanced technologies. Focus on 4G and 5G Networks

What is the bandwidth of 5G network in Qatar?

The bandwidth of a 5G network in Qatar can be up to 100 MHz in frequency range 1 (FR1: 450 MHz to 6 GHz). [citation needed] 5G is expected to have a major impact on the economy of Qatar. It is expected to boost the country's GDP by \$16 billion by 2025 and create over 100,000 jobs. [citation needed]

Does Qatar have 5G?

A 2015 report by the UN Broadband Commission for Sustainable Development ranked Qatar in first place among the developing countries by their respective percentage population using internet. The country also ranked second globally for percentage of households with internet. As of February 2023, 5G coverage in Qatar is at 70%. [citation needed]

Our DAS 5G antenna portfolio helps operators and integrators build robust in-building systems for 5G, LTE and WiFi offloading. A range of WiFi antennas, including WiFi 6 ...

In 1977, Qatar commissioned its first satellite earth station, located about 35 kilometres (22 mi) west of Doha, at a cost of approximately QR 20 million. The facility featured a 270-ton antenna linked to the Indian Ocean satellite, enabling global multi-hop communication. This provided capacity for 30 international telephone circuits, supported 5,000 simultaneous calls, and transmitted two color television channels.

5G adoption is accelerating rapidly across MENA, with 5G expected to rise from 7% of total connections in 2024 to 48% by 2030. Mobile internet use continues to expand, with ...
