The combination of antenna towers and associated electronic equipment is referred to as a "cellular or PCS cell site" or "base station".

If the repeater or remote base is operating under the auspices, and using the callsign of an individual amateur's personal station license, then the operator is the "licensee" of the station, ...

Base stations are the core of mobile communication systems, enabling mobile users to communicate within the coverage area. Relay station, also known as repeater, is a device ...

A repeater at a high elevation enables radios without line-of-sight to communicate. Most repeater systems use two different radio frequencies; the mobiles transmit on one frequency, and the ...

Base stations are perfect for companies that have fleets of vehicles, but any radio network with large numbers of people who need to be supervised or coordinated probably should have a ...

A Repeater is not a real base station, as it does not increase the number of traffic channels. It will also provide a larger physical distribution of the traffic channels and thereby expand the radio ...

A temporary base is a base station used in one location for less than a year. A repeater is a type of base station that extends the range of hand-held and mobile radios.

Overview
Wireless communications
