What is an uninterruptible power supply (UPS)?

Uninterruptible power supplies (UPS) are backup batteries that provide emergency power to electrical systems in case power becomes unavailable. They are connected between a power source (such as an electrical outlet) and the equipment to protect (such as a motor or computer).

What is a three-phase uninterruptible power supply (UPS)?

Three-phase uninterruptible power supplies (UPS) operate in conjunction with existing electrical systems to provide power conditioning, back-up protection, and distribution for electronic equipment loads that use three-phase power. DC uninterruptible power suppliers are designed specifically for DC systems.

What type of power system did Liberia use?

Another is the electrical power system: Liberia's system was the 110 volt/60 Hz cycle variety used in the USA, which foreclosed integration with the 220 volt/50 Hz cycle system in the rest of West Africa, including the MRU. The change from 110 volt/50 Hz cycle system to one of 220 volt/60 Hz cycle was finally made in 1992.

How do I search for a single-phase uninterruptible power supply (UPS)?

Fill out as many options as you want. Click "Run Search Filter" at any time. Your choices are... Single-phase uninterruptible power supplies (UPS) sit between an AC outlet and an electronic device to provide power conditioning, back-up protection, and distribution for electronic equipment loads.
