What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

What are the different types of ups power supply?

Typically, according to different working principles, UPS power supply covers standby (offline) UPS, line-interactive UPS, online (double-conversion) UPS. The standby UPS system offers only the most basic features, providing surge protection and battery backup. Thus, its power supply quality is not good enough and the cost is much lower.

How do I choose a reliable uninterruptible power supply (UPS) system?

When it comes to selecting a reliable Uninterruptible Power Supply (UPS) system, it's important to choose a trusted supplier. Unikeyic Electronics offers a wide range of high-quality UPS systems that cater to various industries, ensuring that your critical equipment is always protected.

What does a ups do if a power supply fails?

The system remains in standby mode, monitoring the main power supply. When it detects a power failure, the UPS switches to backup power from the battery within milliseconds. Best For: Low-power applications, such as home computers, gaming systems, small office equipment, and personal devices.
