Discover how modern communication and tracking systems are transforming mine emergency response, and ensuring MSHA compliance.

Small, lightweight, rapidly deployable Portable Mesh Nodes (PMNs) are the heart of the system, acting as repeaters that establish a robust wireless ...

By investing in high-quality underground radio communication systems, maintaining them properly, and ensuring that employees are trained, mining companies can ...

Transmit images, commands, and sounds from the individual control room command consoles (e.g. communication status, location tracking, environmental monitoring, and other control ...

With a total length of 10 kilometers in a mine tunnel, only about 30 multi-hop self-assembling network relay base stations must be deployed to achieve full wireless broadband network ...

The Command Center, an integral part of the Mine Emergency Command System, is typically staffed and controlled by the Mine Emergency Command Group. This group is generally ...

Intrinsically safe with AES encryption, the Mine Rescue Handset provides clear voice and text communications in a single, rugged device that is tracked by the network.

The E-Pack supports flexible networking, including linking to a temporary base station on a rescue vehicle, ensuring communication coverage ...
