---

Following a period of lull, Romania has achieved in 2023 a significant milestone in its renewable energy journey - over 1 GW of new solar capacity installed in one year between distributed ...

Romania has set an ambitious target to install over 8 Gigawatts of solar energy capacity by 2030, which is anticipated to constitute 24% of its gross final electricity ...

Romania is on track for record solar deployment in 2025, driven by subsidies for residential and commercial and industrial systems ...

Austrian energy company Enery is advancing with plans to construct Europe's largest solar power plant in Romania, with construction set to begin early next year. The 750 ...

Romania is on track for record solar deployment in 2025, driven by subsidies for residential and commercial and industrial systems and a more favorable framework for utility ...

Solar energy is crucial for Romania to meet its decarbonisation goals and to contribute to the European Union's 2050 climate neutrality trajectory. The REPowerEU initiative sets ambitious ...

Complementary energy supply: solar energy should supplement rather than replace grid energy, ensuring continuous power supply and enhancing energy security year-round.

Romania has made significant strides in developing large-scale photovoltaic (PV) projects, contributing to its renewable energy goals. As of the latest data available, there are ...

Romania's rapidly expanding solar sector is a major driver of job creation, with every million EUR invested generating an average of 6.1 jobs, as highlighted in our joint study ...

Romania is set for a significant expansion in the photovoltaic sector in 2025, driven by funding programs such as Casa Verde and RePower EU, the liberalization of energy prices, ...

The electricity produced is expected to cover the equivalent of around 410,000\* households" annual consumption, contributing to national and European climate goals. OMV ...
