Will distributed energy resources be the future of Russia's power system?

According to the International Energy Agency, in the period up to 2030, distributed energy resources will provide up to 75% of new grid connections. For now, the Russian power system remains outside both the "energy transition" revolution and the large-scale development of distributed energy resources.

What is the capacity of distributed generation in Russia?

Table 1. Typical cases of distributed generation in Russia Capacity of 25-600 MW Technology - steam power (for stations launched in the XX century) and gas or reciprocated gas turbine (XXI century). Most often - co-generation. Capacity - usually from 500 kW to 10 MW. The technology - mainly reciprocated gas turbine, less often micro-turbine.

What is distributed generation (DG) in Russia?

Distributed Generation (DG), unlike other types of distributed energy resource, is applied to some extent in Russia. In Russia, power plants with a larger capacity than is common in Europe or the United States are classified as DG.

What is the potential for electricity consumption reduction in Russia?

According to CENEF, the potential for electricity consumption reduction in Russia in 2011 was 379 TWh per year (about 36% of annual consumption). The main drivers of this reduction were energy saving in industry and buildings. Realization of this potential is constrained by the following main barriers:

The ongoing energy transition in Russia is resulting in a growing interest and investment in community energy storage systems. These are small power ...

Russia didn't act against them while they had pro-Russian governments, it only acted when Ukraine became closer to the West, and that speaks a lot of what are Russia's intentions. So, ...

Politically, Russia is the successor of the Ulus of Jochi (the Golden Horde), the western part of the Mongolian Empire. From here we see the high centralization of power and despotism ...

The report dissects the Russia Distributed Energy Storage Systems Market into various segments. A detailed summary of the current scenario, recent developments, and market ...

All kinds of russian BMPs burning to the ground from grenade drops. South of the village of Bilogorivka, Luhansk region.

Some types of DER, like distributed power storage systems, microgrids, electric vehicles, are not common in Russia yet. It is difficult to assess their potential up to 2035, so they are not taken ...

Energy storage technologies are becoming a critical component of the distributed energy-resource-management market. Innovations in battery ...

News, analysis, discussion and investigative journalism documenting the ongoing conflict in Ukraine.

Horizon Databook provides a detailed overview of country-level data and insights on the Russia battery energy storage systems market, including ...

Community driven reporting on the ongoing war in Ukraine - Videos, photos, discussions, this subreddit aims to cover both sides of the narrative and allows intelligent discussions.

But here's a plot twist worthy of Tolstoy: the world's largest country is quietly becoming a playground for energy storage innovation. From Soviet-era pumped hydro giants to cutting ...

In Russia there are the so-called "Putin's May Decrees of 2018" on increasing the salaries of state workers (teachers, scientists, etc.) to 200% of the average regional salary. They are not ...
