-----

In 2024, Germany was the country with the highest electricity generation from solar photovoltaics, amounting to more than 74 terawatt-hours. That is roughly one-fourth of the ...

We investigate the effect of energy independence on Europe's energy system design. We show that self-sufficiency constraints lead to a more equitable distribution of costs ...

Technologies such as agriPV, green hydrogen and floating solar have significant growth potential in Southern Europe.

We do see challenges for solar ahead as it reaches notable levels in Europe's energy system but we are working on solutions to take a leap in supporting grids and flexibility.

Reliable, cost-effective and independent renewables-powered electricity and heat production is coming to small buildings around the world. A cost-effective concentrated solar ...

The Europe Small Solar Power System Market is driven by a combination of policy support, declining technology costs, and increasing environmental consciousness among ...

Major hurdles persist--high upfront capital, orbital debris risk, beam safety regulation, and public acceptance of kilometer-scale receiving stations--but overcoming them ...

Our "Southern Europe solar PV market outlook 2024" covers the key solar market drivers and challenges for large-scale development and distributed solar generation in Iberia, ...

From landmark national milestones to record-breaking individual projects, the data paints a clear picture of a

sector operating at full throttle. The following installations represent the key ...

To become even more independent, however, it is necessary for the EU states to continue to drive forward the expansion of wind power and solar energy. The analysts warn ...
