**SOLID** definition: 1. hard or firm, keeping a clear shape: 2. completely hard or firm all through an object, or....  
Learn more.

having the interior completely filled up: a piece of solid rock. Mathematics having the three dimensions of length, breadth, and thickness: A cube is a solid figure. (of the parts that ...

Solid, one of the three basic states of matter, the others being liquid and gas. A solid forms from liquid or gas because the energy of atoms decreases when the atoms take up ...

Because its particles are packed close together, a solid is rigid, doesn't flow, and isn't easily compressed. A solid is defined as a state of matter with a definite shape and volume.

A solid is a substance that stays the same shape whether it is in a container or not. Solids turn to liquids at certain temperatures.

The meaning of **SOLID** is being without an internal cavity. How to use solid in a sentence.

Without a break or opening; completely or continuously: The theater was booked solid for a month.

Solid-state physics is the study of rigid matter, or solids, through methods such as solid-state chemistry, quantum mechanics, crystallography, electromagnetism, and metallurgy.

A solid is one of the fundamental states of matter, along with liquid and gas. It comprises particles such as atoms, ions, or molecules, packed closely together and held in fixed positions by ...

A solid, as opposed to a liquid or gas, has a size and shape to it. It doesn't flow like water or disappear into the

air.
