---

Gov. Kathy Hochul has announced new framework for the State to achieve six gigawatts of energy storage by 2030 - a move that will double New York's original energy ...

Scientists have implemented a novel method to successfully overcome a major limitation of conventional lithium-ion batteries (LIBs) ...

Utility-scale battery storage in the United States is poised to more than double over the next two years and will close out 2026 at nearly 65 GW -- a rapid rise from 17 GW in the ...

Governor Kathy Hochul today announced that the New York State Public Service Commission approved a new framework for the State to achieve a nation-leading six gigawatts ...

In 2024, the US installed 12.3 gigawatts of energy storage. This year, new grid battery installations are on track to almost double compared to last year.

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.

Generators added 10.4 GW of new battery storage capacity in 2024, the second-largest generating capacity addition after solar. Even though battery storage capacity is ...

Gov. Kathy Hochul has announced new framework for the State to achieve six gigawatts of energy storage by 2030 - a move that ...

Electrical Energy Storage (EES) systems store electricity and convert it back to electrical energy when needed.  
1 Batteries are one of the most common forms of electrical energy storage.

U.S. battery storage capacity has been growing since 2021 and could increase by 89% by the end of 2024 if developers bring all of the energy storage systems they have ...

In 2024, the US installed 12.3 gigawatts of energy storage. This year, new grid battery installations are on track to almost double ...

Researchers from the University of Adelaide have made a zinc-iodine battery breakthrough that achieves double the performance of lithium-ion models.
