It can be seen an increase in both constructs" length and number during the last few decades in China. The long-distance diversion tunnel is a fundamental structure of large-scale diversion ...

This academic study conducts a comprehensive stability evaluation of the structurally critical intake diversion tunnel system at the Jinshuitan Pumped Storage Power Station facility ...

electricity is generated when the reservoir water level is lower than 90m. However, after the hydropower station was put into operation, it is blocked or shut down ab.

Pumped-storage power stations have a large number of diversion tunnels, long tunnel lines and frequent changes in the external water level.

Therefore, this paper provides an update on the the key principles for the planning, design, construction and inspection of hydropower tunnels in light of recent lessons learned.

According to site-specific environments such as high water pressures, high in-situ stresses and strong rockbursts, the design scheme of the long and deep diversion tunnels at ...

The hydropower station diversion tunnel is long. When the upstream water level is low, the minimum upsurge of the surge chamber is likely to be lower than its bottom, which may cause...

The diversion system of Fukang pumped storage power Station in Xinjiang adopts the arrangement of "one hole and two units" and the combination of inclined shaft and hori ...

In this site there are two diversion tunnels which were constructed for 3 years ago. The water gate was

installed on the concrete structure by 100-ton crane during 3 days.

By adopting the hydropower station diversion tunnel plugging construction method, the diversion tunnel can be effectively plugged, and the safety of the dam is further ensured.
