The United States" ability to remain at the forefront of technological innovation depends on a reliable supply of energy from all available electric generation sources and the ...

The Energy Information Administration, in its Short-Term Energy Outlook, is predicting a slowdown in the deployment of solar capacity in the United States, even before ...

Energy leaders recently gathered at Stanford to discuss ways to quickly expand the U.S. electricity supply and infrastructure to meet growing demand. A new report summarizes ...

The report focuses on major improvements to NLR"s Regional Energy Deployment System (ReEDS) model, a publicly available capacity ...

Under current supply chain conditions, the United States is on track to fall significantly short of surging demand for three clean energy sources: wind, solar, and battery. ...

The U.S. power system is on track to hit a new energy transition milestone in April as total clean electricity supplies approach their annual peak while overall electricity demand eases during ...

Home solar systems with battery storage can provide sustainable power during extended blackouts, ensuring refrigeration, communication ...

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power ...
