What is recirculating aquaculture in Saudi Arabia?

The adoption of innovative technologies, such as recirculating aquaculture systems (RAS), has significantly advanced aquaculture in Saudi Arabia. RAS allows for the farming of fish and other aquatic organisms in a closed-loop system where water is continuously filtered and reused.

What is the purpose of aquaculture research in Saudi Arabia?

The goal was to conduct studies on prospective species suitable for fish farming in the Kingdom and introduce new aquaculture hatchery technologies, train qualified Saudis, choose ideal aquaculture sites, and give technical and advisory support to aquaculture farms.

What kind of fish does Saudi Arabia produce?

Saudi Arabia's aquaculture production is made up of White Shrimp, Barramundi, Seabream, and Tilapia. Saudi Arabia has become one of the world's biggest producers and exporters of White Shrimp, exporting to over 40 countries. Photo 3. KAUST R&D site

What is the Saudi Aquaculture Society?

Under MEWA supervision, the Saudi Aquaculture Society was formed. Source: KAUST website Their mission is to participate in preparing the requirements and standards necessary to be applied to the aquaculture industry. Also, conferences and exhibitions for the sector are held, and participation is held inside and outside the Kingdom.
