How much does a commercial lithium battery energy storage system cost?

In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region depending on economic levels.

How much does a battery energy storage system cost?

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Larger systems (100 kWh or more) can cost between \$180 to \$300 per kWh. How does battery chemistry affect the cost of energy storage systems?

How much does energy storage cost?

Energy storage system costs for four-hour duration systems exceed \$300/kWh for the first time since 2017. Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs. Fixed operation and maintenance costs for battery systems are estimated at 2.5% of capital costs.

How much does a lithium ion battery cost?

Lithium-ion batteries, such as those using Lithium Iron Phosphate (LiFePO<sub>4</sub>), are more expensive than lead-acid batteries but offer higher efficiency, longer lifespan, and better energy density. For instance, a 10 kWh lithium-ion battery typically costs \$7,000-\$10,000, while equivalent lead-acid options range from \$2,000-\$5,000.
