Immersion cooling is an advanced thermal management technique where electronic components--such as servers, power modules, or even entire battery packs--are submerged ...

Build faster with Immersion Product Development Kits With the right information for building a haptic system, going from start to finished is much easier. Immersion's product development ...

Immersion is the market leader in haptics. With the help of our experts, R& D team, product, and marketing team, you'll be able to expand your product offerings to the market in a shorter time ...

Immersion cooling has many benefits, including but not limited to: sustainability, performance, reliability, and cost. The fluids used in immersion cooling are dielectric liquids to ensure that ...

In immersion cooling systems the electronic components are placed directly into a container and immersed in a dielectric fluid. The heat generated by the immersed components is directly ...

When you own a piece of Immersion, you're touching technology--literally. Since 1993, we've delivered innovations that blur and break the boundary between the digital world and reality.

Immersion was founded as a gaming company over a quarter-century ago. At that time, with the explosion of personal computing, the internet, and VR 1.0, the potential for digital ...

Immersion's works closely with its ecosystem partners to build high-quality digital touch experience. We can help you chose the right part to deliver the haptic experience you envisioned.

In energy storage, immersion cooling involves submerging battery cells in dielectric fluid with high flash

points and chemical stability. The system works by drawing heat ...

Immersion cooling (see Figure 2) is a liquid cooling method in which servers and other rack components are submerged in a thermally conductive dielectric liquid or fluid within ...

Immersion cooling, where dielectric fluids directly contact cell surfaces, offers a promising solution by enhancing heat transfer efficiency and providing intrinsic safety benefits.

Immersion cooling is an advanced thermal management technique where electronic components--such as servers, power ...
